

Mack LEU613 Eco-Pur Mounting

This is the selected mounting location for the Eco-Pur system on a Mack LEU613. This area is the power steering reservoir bracket on the upright post behind the cab on the driver side of the truck. Split the difference with the bottom of the bracket and the center mounting holes of the Eco-Pur bracket. Occasionally, there will be an air condensate filter mounted to the bracket that may need to be relocated. This location and positioning allows ample clearance between the top of the Eco-Pur and the bottom of the air filter housing.
